PROFESSIONAL SUMMARY

Principal-level Software Engineer with extensive experience building and modernizing enterprise web applications across full-stack environments. Strong background in .NET-based systems combined with deep expertise in frontend architecture, design systems, and scalable UI platforms.

Experienced working across teams to deliver maintainable, user-centered applications while remaining hands-on in development, prototyping, and system design. Known for bridging gaps between architecture and implementation, enabling teams to build consistent, scalable software at speed. Comfortable working across the stack, with a focus on building well-structured systems that connect backend services with intuitive, user-centered interfaces.

CORE COMPETENCIES

- **Full Stack Development:** .NET Core / ASP.NET, C#, PHP, SQL Server, MySQL, Nuxt, Cloudflare Workers, Node.js, Express, REST APIs
- **Frontend Engineering:** Vue.js, React, TypeScript, Tailwind CSS, Component Architecture, State Management, API Integration
- **Design Systems & UI Platforms:** Component Libraries, Design Systems, Web Components, Documentation & Developer Experience
- **Technical Leadership:** Architecture Guidance, Mentorship, Code Reviews, Cross-Team Collaboration
- **Tooling & DevOps:** Vite, Node.js / npm, CI/CD (GitHub Actions, Jenkins), Observability (Datadog, Pendo)
- **AI Integration:** OpenAI APIs, AI-Assisted workflows (GitHub Copilot, Cursor, Claude)

PROFESSIONAL EXPERIENCE

ACS Technologies, Inc.

Enterprise Front-End Architect | Sep 2022 - Feb 2026

- Served as senior frontend technical authority across 10+ engineering teams and 8+ SaaS applications, influencing the work of 30+ engineers organization-wide through architectural standards, code reviews, and hands-on implementation
- Built and evolved the Particle design system — 50+ components adopted across 5 teams and 15+ engineers — accelerating frontend development velocity, reducing architectural dependency on senior engineers, and improving onboarding speed for new team members
- Developed a framework-agnostic Web Components platform that extended shared, reusable UI across 6 products spanning Vue, Angular, and React stacks — eliminating duplicated feature builds without adding framework dependencies to any consuming application
- Led Vue 2 to Vue 3 migration for a flagship product spanning 5 engineering teams, delivering a reusable upgrade framework that enabled incremental adoption without disrupting active release cycles
- Implemented AI-powered content generation features using OpenAI APIs, automating creation of group and event descriptions — reducing manual entry for staff and accelerating common high-frequency workflows
- Integrated contextual help content APIs directly within the product UI, eliminating context switching for users seeking support — including a client-side caching layer that prevented redundant API calls and improved perceived performance for returning users
- Mentored and provided architectural guidance to 8-10 engineers through code reviews, pairing, and hands-on implementation — reducing direct dependency on senior review over time
- Promoted accessibility and usability best practices across shared UI components and design system foundations
- Contributed to backend integration patterns and API design within a .NET ecosystem, ensuring alignment between frontend architecture and service-layer capabilities

Architect Lead | May 2021 - Sep 2022

- Led architectural redesign of a flagship SaaS platform, improving maintainability and enabling faster feature development
- Migrated legacy jQuery-based UI systems to a modern Vue component architecture, reducing technical debt and regression risk
- Acted as escalation point for complex frontend challenges, resolving cross-team technical blockers
- Provided mentorship and training that improved consistency and quality across engineering teams

Principal Software Engineer | Aug 2016 - May 2021

- Led a Frontend Community of Practice supporting 30+ engineers, aligning patterns and reducing architectural divergence
- Established shared frontend patterns, asset pipelines, and review practices to improve long-term maintainability
- Drove early modernization efforts toward component-based architectures, improving development velocity
- Contributed to hiring and mentoring efforts, strengthening frontend expertise across teams

Senior Software Architect | Apr 2012 - Aug 2016

- Defined frontend technical direction and mentored developers to improve code quality and consistency
- Built and documented shared frontend patterns and components to support cross-team reuse
- Developed an internal “app kit” with documentation, code samples, and live demos to accelerate onboarding
- Initiated transition from jQuery plugins to Vue-based component architecture within a .NET platform

EDUCATION

Francis Marion University, Florence, SC

Bachelor of Science, Computer Science

Minor in Applied Mathematics

President's List; Dean's List

PROJECTS

Verse of the Day | Nuxt / Vue / Cloudflare Worker / Node.js

Built and deployed a Nuxt/Vue application along with a Cloudflare Worker and Node.js Web Push service, delivering daily dynamic content with subscription-based push notifications.

youbibleverse.com

Magic Resume Generator | Vite / Vue 3

Developed a resume generation system using Vite, Vue 3, Puppeteer, and LESS to programmatically render and export tailored PDF resumes.
