

Douglas Gainey

Senior Full-Stack Engineer | Vue.js | TypeScript | .NET/C#
douggainey@gmail.com | [douggainey.com](mailto:douggainey@gmail.com) | [linkedin.com/in/doug-gainey](https://www.linkedin.com/in/doug-gainey)

Professional Summary

Senior Full-Stack Engineer with extensive experience building scalable, data-driven SaaS applications across frontend and backend systems. Deep expertise in Vue.js, TypeScript, .NET/C#, SQL, REST APIs, and cloud-based services, with a strong focus on creating intuitive user experiences for complex business workflows. Experienced leading modernization initiatives, designing reusable component systems, integrating frontend applications with distributed backend services, and delivering maintainable, high-performance software in fast-moving product environments. Hands-on engineer who enjoys collaborating closely with product, design, and data teams to turn complex requirements into polished, user-centered solutions.

Core Competencies

Frontend Engineering: Vue.js, TypeScript, JavaScript, React, Nuxt.js, Tailwind CSS, HTML5, CSS3, Vite

Backend & APIs: .NET Core, ASP.NET, C#, Node.js, Express, REST APIs, Microservices Integration

Data & Persistence: SQL Server, SQLite (Cloudflare D1), API-driven applications, Data-intensive workflow applications

Cloud & DevOps: Git, GitHub Actions, Jenkins, CI/CD, Cloudflare Workers, Observability (Datadog, Pendo)

Frontend Architecture: Component Libraries, Design Systems, Web Components, Accessibility (WCAG), Performance Optimization

AI & Productivity: OpenAI API, GitHub Copilot, Cursor, Claude

Professional Experience

Senior Front-End Developer | Security Risk Advisors, Intl.

Jul 2026 – Present

Currently serving as a senior engineer building VECTR, a cybersecurity tool used by Fortune 500 companies for purple team collaboration and adversary simulation reporting.

Enterprise Front-End Architect | ACS Technologies, Inc.

Sep 2022 – Feb 2026

Led the design and implementation of shared frontend systems and data-driven SaaS experiences across multiple enterprise applications, collaborating closely with backend, product, and UX teams to deliver scalable, maintainable solutions.

- Built and maintained the Particle design system, a shared component library adopted across 8+ enterprise applications and used by 30+ engineers to deliver consistent, reusable UI patterns.
- Developed a framework-agnostic Web Components platform enabling shared UI functionality across Vue, Angular, and React applications during ongoing modernization efforts.
- Led Vue 2 → Vue 3 migration initiatives across multiple engineering teams, creating reusable migration patterns that enabled incremental adoption without disrupting active product delivery.
- Integrated frontend applications with RESTful backend services and asynchronous data flows, supporting complex business workflows and large-scale SaaS operations.
- Collaborated with product managers, designers, and backend engineers to simplify complex data-driven workflows and deliver intuitive, accessible user experiences.
- Built AI-powered content generation features using OpenAI APIs, automating workflow tasks and reducing manual data entry for end users.
- Mentored engineers through code reviews, pairing, and architecture discussions while remaining actively hands-on in implementation and debugging.

Architect Lead | ACS Technologies, Inc.

May 2021 – Sep 2022

Led the architectural redesign of a flagship church management SaaS platform, balancing active feature delivery with long-term maintainability.

- Drove the transition from a legacy jQuery-based UI to a modern Vue component architecture, reducing technical debt while keeping teams productive throughout the migration.
- Worked closely with product and design to translate requirements into clean, maintainable frontend implementations, and with backend engineers to define API contracts that served the UI well.
- Established code review practices across the team focused on consistency, accessibility, and long-term code health.
- Acted as the primary escalation point for complex frontend challenges across product teams.

Principal Software Engineer | ACS Technologies, Inc.

Aug 2016 – May 2021

Hands-on principal engineer and community leader focused on shared component systems and frontend standards across a 30+ engineer organization.

- Built and maintained the shared component library and asset pipeline that became the direct foundation for the Particle design system.
- Led a Frontend Community of Practice across 30+ engineers, creating a regular forum for aligning on patterns, surfacing issues, and sharing knowledge across distributed teams.
- Drove adoption of modern frontend practices including component-driven development, TypeScript, and performance optimization across the engineering organization.

Senior Software Architect | ACS Technologies, Inc.

Apr 2012 – Aug 2016

Hands-on architect responsible for frontend technical direction, shared component systems, and full-stack feature delivery across a large .NET and JavaScript platform.

- Delivered full-stack features across SQL Server databases, .NET backend services, and modern JavaScript frontends, owning work end-to-end from design through deployment.
- Defined shared frontend standards and mentored engineers on component design, code quality, and accessible development practices.
- Initiated and led the transition from jQuery plugin architecture to a Vue-based component system, establishing the foundation for future frontend modernization efforts.

Projects

Particle Design System | *Vue.js / JavaScript / CI/CD / Custom Documentation Site*

Built and owned the Particle design system for Realm, ACS Technologies' flagship church management platform. Extracted shared components from the product codebase into a standalone package with its own repository, versioning, and CI/CD pipeline. Built a documentation site featuring 50+ components, each with live interactive demos, copyable code snippets, and full prop and event references. Established governance and monthly community of practice that made Particle the default starting point for development across 30+ engineers.

Verse of the Day | *Nuxt / Vue / Cloudflare Worker / Node.js / Web Push*

Built and deployed a full-stack Nuxt/Vue application with a Cloudflare Worker handling edge logic and a Node.js Web Push notification service delivering subscription-based daily Bible verses.

youbibleverse.com

Personal Portfolio Site | *React / TypeScript / Tailwind CSS*

Designed and built a personal portfolio site in React with TypeScript and Tailwind CSS.
